

ANKIT KUMAR

Jr. DevOps Engineer | Kubernetes • CI/CD • Cloud Infrastructure

New Delhi, India | Ankitkumar6034651@gmail.com | +91 8882092012 | [LinkedIn](#) | [Portfolio](#)

SUMMARY

DevOps Engineer with ~1.5 years of hands-on experience building CI/CD pipelines, Kubernetes and cloud infrastructure. Delivered an infrastructure monitoring and alerting system with automated incident remediation, and an end-to-end quote management system integrated with Zoho. Strong foundation in Kubernetes, Docker, AWS, and Infrastructure as Code, with growing exposure to Kafka and many more tools. Seeking a Cloud/DevOps role at a Kubernetes-native infrastructure company.

SKILLS

Containers & Orchestration: Kubernetes, Docker
CI/CD & GitOps: GitHub Actions, Gitlab CI, ArgoCD
Cloud Platforms: AWS, Google Cloud, OpenStack
Infrastructure as Code: Terraform, Ansible
Monitoring & Observability: Prometheus, Grafana, Elk Stack
Messaging: Apache Kafka (working knowledge)
Scripting & Automation: Python, Bash, Shell
Operating Systems: Linux (Ubuntu, Red Hat 9), Windows
Networking: DNS, Load Balancers, Firewalls

EXPERIENCE

Jr. DevOps Engineer | Qualtech Consultant, New Delhi

Sep, 2025 – Present

- Built an infrastructure monitoring and alerting system with container-specific monitoring and automated remediation for common incidents (e.g., high CPU utilization, High Storage Usage), cutting manual intervention by 50%.
- Designed and delivered an end-to-end quote management system (QMS Portal) using TanStack Start, PostgreSQL, and Docker, integrated with Zoho for streamlined data sync across sales workflows; production-hardened the Docker Compose deployment.
- Optimized CI/CD pipeline build times for a React/Node.js application by replacing modules copy from CI-server approach with GitLab CI caching keyed on yarn.lock, cutting build/release time by 20% and speeding up release cycles.
- Own CI/CD pipeline management, release and Deployment coordination, Linux server administration, and environment troubleshooting across multiple internal projects.

DevOps Intern | Infrasity, New Delhi

Dec 2024 – Feb 2025

- Evaluated developer tools and platforms from early-stage tech startups, testing core functionality and interoperability with complementary tools in real-world workflows.
- Tested and validated latest feature releases across partner platforms, surfacing bugs, edge cases, and integration issues ahead of general availability.
- Built requested features and proof-of-concept integrations on client platforms based on product and engineering requirements.
- Authored technical articles documenting tool evaluations, integration workflows, and feature walkthroughs for reference documentation.

AWS Cloud Intern | LinuxWorld Informatics Pvt. Ltd., New Delhi

Jun 2023 – Aug 2023

- Designed and deployed scalable cloud infrastructure on AWS using Docker and Linux to support high-performance applications.
- Built and launched an automated food ordering bot service on AWS for a major e-commerce platform.
- Implemented cloud-based solutions that improved operational efficiency for a large-scale e-commerce platform.

PROJECTS

PreProdSync — Kubernetes Solution for DevOps Integration & Testing

Dec 2024 – Feb 2025

github.com/Kumar22Ankit/PreProdSync-test

- Engineered a Kubernetes-based CI/CD solution to automate integration and testing of new features in a pre-production environment.
- Reduced deployment timeline by 30% by automating build and container orchestration with Kubernetes.
- Improved release reliability by implementing an automated testing framework triggered on every commit.
- **Stack:** *Kubernetes, Docker, GitHub Actions, ArgoCD, Node.js, React, PostgreSQL*

OrderFlow — Legacy Java EE to Kubernetes Migration

github.com/Kumar22Ankit/orderflow-k8s-migration

- Migrated a legacy multi-module Jakarta EE application (WildFly + Oracle-style stack) to Kubernetes, isolating each WAR into its own pod to resolve a Log4j 1.x/2.x classloader conflict inherent to shared application-server classloading.
- Applied production-hardening patterns including DB-readiness init containers, health-check-based liveness/readiness probes, and StatefulSets for stateful services.
- Documented the root-cause investigation and architecture decisions, and wired a GitOps-based CI/CD pipeline for automated builds and deployment.
- **Stack:** *Kubernetes (minikube/Helm), Docker, WildFly, OpenJDK 17, Maven, PostgreSQL, GitHub Actions, ArgoCD*

AWS EKS IRSA — Least-Privilege Pod-to-AWS Access

github.com/Kumar22Ankit/AWS-EKS-IRSA-Least-Privilege

- Implemented IAM Roles for Service Accounts (IRSA) on Amazon EKS, scoping a pod's AWS access to a single S3 bucket via OIDC federation instead of broad node- or user-level IAM permissions.
- Provisioned the EKS cluster and IAM trust/policy resources with Terraform, and verified least-privilege enforcement by testing authorized vs. denied S3 access from inside the pod.
- **Stack:** *AWS EKS, IAM/OIDC, Terraform, Kubernetes*

EDUCATION

B.Tech in Computer Science and Technology (Cloud Computing)

2025

IEC College of Engineering and Technology, Greater Noida, UP

Diploma in Production Engineering

2022

G.B. Pant Institute of Technology, New Delhi

CERTIFICATIONS

- Google Cloud Digital Leader Training Specialization — Coursera, 2023

LEADERSHIP & INVOLVEMENT

- **GDG on Campus Organizer, IEC** — Google Developer Groups (Sept 2024 – Aug 2025). Led a chapter organizing cloud, AI, and open-source events for 200+ students; managed a 15-member volunteer team.
- **Founder & Contributor, Abhiyantrik** — IEC College (Jan 2024 – Present). Founded a 100+ member technical community; organized workshops on emerging technologies.
